

STEPCONE-2025

STANDARD OPERATING PROCEDURE

EVENT NAME: Tinkercad

DEPARTMENT NAME: Electronics And Communication Engineering

EVENT TYPE: Technical Event

EVENT DESCRIPTION:

Tinkercad is a cloud-based, open-source software for 3D design, electronics, and coding, accessible from any operating system. Users must set up an account and have a basic understanding of electronics and Tinkercad to participate in the program. Performance and accuracy determine scores, with teams ranked based on their results in the initial rounds, allowing qualified teams to advance. The highest-scoring team is declared the winner, while the second-highest becomes the runner-up.

Round 1:

In this round, there are a total of 10 problem statements that are related to ECE domain and are at the basic level (EDC, LCD, MPMC, etc.). One hour has been allotted for this round. The number of Problem statements they have resolved determines their score.

Round 2:

Three issue statements relating to the implementation of Arduino code and the operation of the code in real-time projects have been provided in this round. It takes about two hours to complete this round. Their performance and the quantity of problems they have resolved determine their score.

Round 3:

In this round, we've provided a problem description based on an actual industrial project. This round takes roughly two to three hours. Their performance and project execution on Tinkercad are used to determine their score.

EVENT GUIDELINES:

- They need to understand how the Tinkercad software works clearly.
- They should not extend the given time limit while delivering their topic.
- They should deliver the topic in an organized manner.

Team Size/No of Participants: 2 Members

PLAN OF ACTION: Overnight event

Duration of event:

9 hours – Day 1 - 10:00 PM to 6:00 AM

Judging Criteria:

Among the teams, the team with the highest score will be declared as winners, while the team with the second-highest score will be recognized as the runner-up in this Tinkercad event.
